

FAM-Dispenser

with FORMIVAR® ad us.vet., formic acid for summer treatment

Period of best use

1	2	3	4	5	6	7	8	9	10	11	12
---	---	---	---	---	---	---	---	---	----	----	----

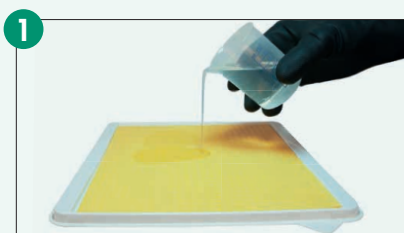

- Low profile
- Easy to prepare and to place
- Fast adjustment of evaporation thanks to rotating disc

Application

- ✓ Feed small amount before treatment
- ✓ First treatment shortly after honey harvest for 7 days
- ✓ Second treatment after completed winter feeding for 14 days in September

Dosage

- ✓ 110–150 ml FORMIVAR® per treatment
- ✓ Simply adjust rotating disc for best dosage
- ✓ Remove immediately after treatment

1. Measure and soak

Measure required amount and strength of FORMIVAR® and carefully soak sponge cloth.

2. Adjust disc

Adjust disc for colony size and temperature.

3. Place and treat

Place dispenser with rotating disc facing down. Keep 2 cm distance to brood frames.
