- Well suited for standard hives
- With adaptable paper wick for easy dosage
- Easy to fill and to check with imprinted measuring scale.

Application

- ✓ First Application after honey harvest mid-end of June
- ✓ Feed the colony after first treatment
- ✓ Second treatment in September for 6–14 days

Dosage

- ✓ Use 50–200 ml of FORMIVAR® 85% per treatment
- ✓ Adjust the paper wick respecting hive system and temperature.

1. Adjust

Adjust size of paper wick following the instructions for hive system and temperature.

2. Fill

Remove dropper and fill bottle with the required amount. Insert dropper and close with cap for transport to the hive.

3. Place

Place bottle on Support with adjusted paper wick. Formic acid will soak the paper and evaporate.
